Ordinary estate

Morning estate review - 06:00

Scheduled run

Read-only sweep. 7 findings, ranked. Nothing was changed.

CRITICAL

aws-prod-payments has been in ERROR for 3 days
Inventory for 248 resources has not refreshed since Thursday

[View](#)

HIGH

Drift on payments-db-primary is 21 days old
It has gained 11 downstream dependents since detection

[View](#)

HIGH

Reconcile sync run failed on k8s-prod-blr
Failed 4 consecutive nights; last success 5 days ago

[View](#)

MEDIUM

Spend on Database is 14% above run rate
Driven by payments-db-primary and reporting-db-replica

[View](#)

LOW

6 resources are ORPHANED and still costing \$318 / mo
Last seen more than 30 days ago

[View](#)

Ranked by severity, dependents and age. 2 further findings omitted by the per-run cap.

DRIFTED 4 days ago

owner: payments

aws-prod-payments

Attributed to the resource, not the service line.

Rightsizing candidates

Resource	Type	Est. saving / mo	Blast radius	Note	
reporting-db-replica	aws.rds.instance	\$840	0 dependents	idle 21 days	Recommendation only
batch-worker-pool	k8s.deployment	\$620	2 dependents	p95 CPU 11%	Recommendation only
legacy-nat-gw	aws.ec2.natgateway	\$400	6 dependents	demoted - dependents at risk	Recommendation only

Policies / New policy

Designed - not yet available. Shown as intended behaviour.

Describe the rule

Every production database must carry an owner tag and must not be publicly reachable.

Draft guardrail

Could not resolve

publicly reachable - matched attribute network.publicAccess on 2 of 3 adapter kinds

production - inferred from environment field

Draft policy - review before saving

Name: Production DB owner tag + no public access Kind: SECURITY

Enforcement: WARN Severity: HIGH

Applies to: aws.rds.instance, k8s.statefulset Active: yes

```
all
├── tags.owner
│   └── exists
├── network.publicAccess
│   └── equals false
```

One continuous, governable fabric for your entire estate

AdapterCloud connects fragmented infrastructure — multi-cloud, on-prem, edge, IoT, networking and SaaS — into one workspace-native control plane. Discover, govern, and observe the whole estate from a single source of truth.

[Join the Waitlist](#)
[Sign In](#)

- ✓ one adapter model for cloud/on-prem/edge/IoT/K8s/SaaS
- ✓ unified resource inventory with dependency topology
- ✓ policies, violations and drift as first-class auditable data
- ✓ cost attributed to the same resources you operate
- ✓ multi-tenant isolation, RBAC and audit
