

SERVICES FOR BIGCONSOLE

The product does the dashboards. **We do the rest.**

BigConsole turns plain English into governed, live consoles. Our services team helps you get there faster. Where you would rather hand it off entirely, we deliver done-for-you analytics outcomes powered by the platform.

IMPROVE YOUR BIGCONSOLE

DONE-FOR-YOU OUTCOMES

CONSOLES YOU OWN

01 A service for every step

Each offering maps to a real BigConsole capability: consoles, the governed data plane, AI authoring, sharing, templates, and platform-grade governance.

Services come in two tracks. Improve your BigConsole helps your own team adopt the platform and run it well, from the first prompt to a governed estate of consoles. Powered by BigConsole is for teams who would rather not build it themselves: we deliver the outcome and hand it over as portable, governed artifacts you own.

TRACK 01 · IMPROVE YOUR BIGCONSOLE

Get more from the platform

Onboarding, integration, governance, migration, managed operations, and training: everything that helps your team adopt BigConsole and run it well.

Data Integration & Pipeline Engineering · Data Governance, RBAC & Security Setup · Legacy BI Migration · Managed Analytics & Ongoing Operations · AI-Insights Enablement & Training

TRACK 02 · POWERED BY BIGCONSOLE

Done-for-you outcomes

Finished consoles, analytics-as-a-service, and embedded analytics: real outcomes produced on BigConsole and handed over as portable, governed artifacts you own.

Console & Dashboard Design + Build · Analytics & BI Consulting · Embedded Analytics

02 · TRACK ONE

Improve your BigConsole

Onboarding, integration, governance, migration, managed operations, and training. Everything that helps your team adopt BigConsole and run it well, from the first prompt to a governed estate of consoles.

WE SET IT UP WITH YOU, NOT JUST FOR YOU

Leave your team self-sufficient

We pair with your people through the prompt-to-console workflow, document the patterns that work, and leave behind reusable templates and readable parsers.

- 2.1 Data Integration & Pipeline Engineering
- 2.2 Data Governance, RBAC & Security Setup
- 2.3 Legacy BI Migration
- 2.4 Managed Analytics & Ongoing Operations
- 2.5 AI-Insights Enablement & Training

02 Improve your BigConsole: data, trust and the move

2.1 · DATA PLANE

Data Integration & Pipeline Engineering

We build the governed data plane that feeds every console: keyed DataSinks, readable JQ/JSONata parsers verified against your real payloads, and multi-stage pipelines that join across sources, with FluidGrids workflows owning the connectors.

- Source mapping and DataSink key design, workspace-scoped and version-locked
- JQ / JSONata parsers authored and proven in the live test-runner
- Multi-stage pipelines joining CRM × ERP × targets with fail / skip / fallback per stage
- FluidGrids workflow links so sources push into sinks by key
- Manual-ingestion and mock-data paths to unblock build before live feeds land

2.2 · GOVERNANCE

Data Governance, RBAC & Security Setup

Stand up BigConsole so trust is the default. We configure workspace isolation, role-based sharing, and the field-masking and row-level-security models for regulated data: governance that rides along with every console from the first prompt.

- Workspace and role design with built-in RBAC on every operation
- VIEW / EDIT sharing and PRIVATE / WORKSPACE / PUBLIC visibility matrices
- Field-masking rule design at the sink boundary for PII / PHI
- Row-level-security policy design for per-viewer console rows
- Audit and export review so console changes stay attributable

2.3 · MIGRATION

Legacy BI Migration

Move off Tableau, Power BI, or Looker without losing institutional knowledge. We inventory your existing reports, rebuild them as BigConsole consoles, and leave you with portable JSON definitions instead of dashboards trapped in a proprietary binary.

- Audit and prioritisation of existing dashboards and their owners
- Metric and visual parity mapping to BigConsole widgets and filters
- Rebuild as multi-page consoles fed by governed sinks and parsers
- Side-by-side validation so stakeholders trust the new numbers
- Cutover plan and team handover with versioned Console Definition JSON

02 Improve your BigConsole: run it and make it stick

2.4 · OPERATIONS

Managed Analytics & Ongoing Operations

Keep your consoles healthy after launch. We run the data plane and the boards for you: monitoring sink freshness, evolving parsers as sources change, adding consoles as the questions change, and keeping the whole estate governed.

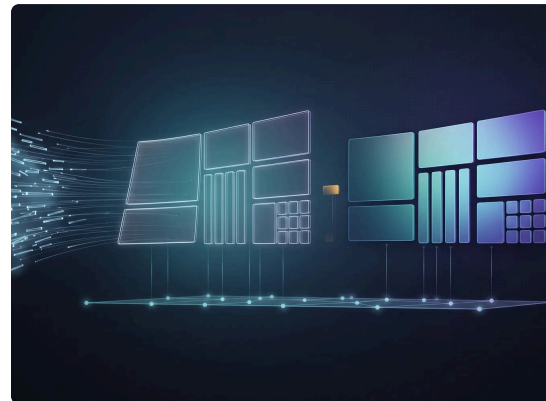

- Monitoring of sink status, freshness, and refresh health
- Parser and pipeline upkeep as upstream schemas drift
- New console and widget requests handled on a predictable cadence
- Real-time wall-board patterns kept live on dataSink subscriptions
- Roadmap-aware adoption of new capabilities as they ship

2.5 · ENABLEMENT

AI-Insights Enablement & Training

Turn your team into confident BigConsole authors. We run hands-on enablement on the prompt-to-console workflow, coach effective prompt patterns, and train analytics engineers on parsers, pipelines, and the programmatic API.

- Workshops on the Insights surface: prompt, preview, refine, materialize
- Prompt-pattern playbooks tuned to your metrics and console categories
- Analytics-engineer training on JQ / JSONata parsers and pipelines
- Builder and governance onboarding for business users and admins
- Reusable internal templates so good patterns spread across teams

FROM THE FIRST PROMPT

Onboarding, integration, governance, migration, managed operations, and training, through to a governed estate of consoles.

03 · TRACK TWO

Powered by BigConsole

Don't want to build it yourself? We deliver finished consoles, analytics-as-a-service, and embedded analytics: real outcomes produced on BigConsole and handed over as portable, governed artifacts you own.

TELL US THE QUESTIONS

We'll deliver the consoles

Hand us the questions your team keeps asking. We return finished, governed consoles, agreed metric definitions, or analytics embedded in your own product.

3.1 Console & Dashboard Design + Build

3.2 Analytics & BI Consulting

3.3 Embedded Analytics

03 Powered by BigConsole: done-for-you outcomes

3.1 · BUILD

Console & Dashboard Design + Build

Hand us the questions your team keeps asking and we deliver finished, governed consoles, multi-page and multi-widget, ready to run the meeting from. We prompt the first draft with the Insights surface, then refine it widget by widget into a board you own.

- Discovery of the metrics, audiences, and decisions each console serves
- Prompt-to-spec drafts refined into multi-page consoles on the 12-column grid
- KPI, line, bar, area, pie, table, funnel, heatmap and retention widgets wired to real data
- Global filters with cascade, URL sync, saved presets, and 1:1 drilldowns
- Handover as a portable Console Definition JSON you can version and reuse

3.2 · CONSULTING

Analytics & BI Consulting

Analytics-as-a-service for teams without a data function. We translate business questions into the metrics, definitions, and console layouts that answer them, so your numbers are agreed once and read the same way everywhere.

- Metric definition and a shared source-of-truth glossary
- Executive cockpit, finance, sales, ops and HR board design grounded in real workloads
- Drilldown and cross-filter strategy from summary to detail consoles
- KPI target-setting, variance flagging, and conditional formatting
- Quarterly review of what the boards reveal and what to build next

3.3 · EMBEDDED

Embedded Analytics

Ship analytics inside your own SaaS without building a BI stack. We embed BigConsole consoles in your product, scoped per customer by workspace and governed by built-in RBAC. BigConsole is offered under its own name; there is no white-label edition.

- Console layouts for each customer audience, with built-in light, dark, and auto themes
- Per-tenant isolation via workspace scoping and visibility controls
- Template-driven rollout so each customer gets a governed copy
- Unified API integration: anything the UI does, your app can do
- Console Definition JSON as the contract between your team and ours

04 How we engage: discover, plan, build, operate

A predictable engagement model. Start with a focused discovery, leave with consoles you own, and keep us on for operations only if you want to.

01

Discover

We map the questions, audiences, sources, and governance needs, and agree the metrics before a single widget is drawn.

02

Plan

A console blueprint and data-plane design: sink keys, parsers, pipelines, sharing model, and a delivery roadmap.

03

Build

We prompt, refine, and wire live consoles to governed data, handed over as portable Console Definition JSON you own.

04

Operate

Optional managed operations: monitor freshness, evolve parsers, add consoles, and adopt new capabilities as they ship.

FIRST STEP

The first conversation is a focused discovery, with no commitment.

PRICING

Contact us. Tell us the questions and we will scope the engagement.

05 We set it up with you, not just for you

Every engagement is designed to leave your team self-sufficient, so the value compounds long after we've handed over.

- We pair with your people through the prompt-to-console workflow
- We document the patterns that work
- We leave behind reusable templates and readable parsers

HOW TO START

Tell us the questions. We'll deliver the consoles.

Whether you want help adopting BigConsole or a done-for-you analytics outcome, the first conversation is a focused discovery, with no commitment.
