

CONSULTING & MANAGED SERVICES

Expert hands on EcoImpactHub

EcoImpactHub is a platform you can run yourself, but you do not have to do it alone. We help you adopt and get more from EcoImpactHub, and we deliver done-for-you environmental outcomes powered by it: program builds, integrations, migrations, monitoring operations, governance and enablement.

GROUNDED IN THE PRODUCT

GOVERNANCE & AUDIT THROUGHOUT

API-FIRST & INTEGRATION-READY

01 What we do

Services across the EcoImpactHub program lifecycle, every one grounded in a real product capability. Engage one, or combine several into a program.

EcoImpactHub is a unified platform for environmental monitoring, sustainability reporting and wildlife conservation. The services wrap around it in two tracks: help improving the workspace you run, and outcomes we deliver for you using it.

GROUNDED IN THE PRODUCT

GOVERNANCE & AUDIT THROUGHOUT

API-FIRST

TRACK 01

Improve your EcoImpactHub

Consulting, implementation, migration, governance and training so your team gets the full value of the platform, faster, and with assurance from day one.

Sustainability Strategy & Consulting · Data Migration & Onboarding · Monitoring & Field Operations Enablement · Environmental Analytics & AI Enablement · Compliance, Governance & Assurance · Training & Team Enablement

TRACK 02

Powered by EcoImpactHub

Done-for-you outcomes we deliver using the product (program builds, integrations and managed environmental operations) so you can focus on the mission.

Implementation & Program Build · Integrations & Data Pipelines · Managed Environmental Operations

02 · TRACK ONE

Improve your EcoImpactHub

Consulting, implementation, migration, governance and training so your team gets the full value of the platform, faster, and with assurance from day one.

SIX SERVICES

From program design to a team that runs it

Design the program right, bring your historical data across, make field collection and monitoring trustworthy, put the data to work, meet your compliance bar and get every role productive.

- 2.1 Sustainability Strategy & Consulting
- 2.2 Data Migration & Onboarding
- 2.3 Monitoring & Field Operations Enablement
- 2.4 Environmental Analytics & AI Enablement
- 2.5 Compliance, Governance & Assurance
- 2.6 Training & Team Enablement

02 Improve your EcoImpactHub: design, migrate, operate

2.1 · STRATEGY

Sustainability Strategy & Consulting

We help you design the right environmental program on EcoImpactHub (emission boundaries, monitoring methodology, reporting frameworks and data model) so carbon, biodiversity and ESG work is set up correctly from day one.

- Discovery of your current environmental data, tools and reporting
- Carbon boundary and Scope 1/2/3 methodology design
- Framework selection and disclosure-mapping recommendations
- Monitoring-program and indicator design across sites and projects
- Workspace, roles and multi-organization structure grounded in the platform

2.2 · MIGRATION

Data Migration & Onboarding

Moving off scattered spreadsheets, a separate GIS tool and disconnected monitoring databases? We migrate your historical environmental data, projects and sites into EcoImpactHub with minimal disruption.

- Inventory of current carbon, monitoring and reporting systems
- Historical measurement and observation migration with validation
- Site, project and species-catalog import with mapping
- Parallel-run validation and a reversible cutover plan
- Team handover with runbooks for the new data model

2.3 · FIELD OPERATIONS

Monitoring & Field Operations Enablement

We turn day-to-day monitoring into a smooth operation (field collection, sensor checks, restoration plots and incident reporting) with the workflows, roles and validation that keep your data trustworthy.

- Field-form and offline-capture configuration for your protocols
- Sensor-network and threshold-alert setup
- Restoration-plot and survival-tracking workflow design
- Community and citizen-science program enablement
- Data-quality and validation rules built into collection

02 Improve your EcoImpactHub: analyse, govern, enable

2.4 · ANALYTICS & AI

Environmental Analytics & AI Enablement

We help you put the platform's data to work (trend detection, anomaly alerts and forecasting) as a governed roadmap, so decisions move from gut-feel to evidence without overstating what exists today.

- Dashboard setup across emissions, biodiversity, water and energy
- Trend- and anomaly-detection configuration for your indicators
- Forecasting and scenario modelling scoped to your data
- Hotspot and prioritization analysis across sites and supply chain
- Honest current-vs-roadmap framing so expectations stay accurate

2.5 · GOVERNANCE

Compliance, Governance & Assurance

We configure EcoImpactHub to your compliance bar (least-privilege roles, audited actions, sensitive-location safeguards and assurance-ready evidence trails) inherited from the Burdenoff platform rather than re-invented.

- Role design and least-privilege access reviews
- Sensitive species- and site-data safeguards
- Audit-log review, retention configuration and evidence workflows
- Disclosure assurance preparation and methodology documentation
- Data-protection and subprocessor alignment for your jurisdiction

2.6 · ENABLEMENT

Training & Team Enablement

We get your scientists, program managers and engineers genuinely productive, not just logged in. Role-based sessions and golden-path playbooks so a new analyst builds a report, and a new developer drives the API, in hours.

- Hands-on workshops for field teams, analysts and program managers
- Golden-path playbooks for monitoring, carbon and reporting
- API, CLI and SDK enablement for engineering teams
- Admin and governance training for program operators
- Onboarding checklists and curated learning paths

03 · TRACK TWO

Powered by EcoImpactHub

Done-for-you outcomes we deliver using the product (program builds, integrations and managed environmental operations) so you can focus on the mission.

THREE SERVICES

Build it, connect it, run it

A working environmental data flow from launch, your own systems connected through the documented API and webhooks, and the option to hand us day-to-day operation of the program.

3.1 Implementation & Program Build

3.2 Integrations & Data Pipelines

3.3 Managed Environmental Operations

03 Powered by EcoImpactHub

3.1 · PROGRAM BUILD

Implementation & Program Build

Our specialists stand up your EcoImpactHub-powered program end to end (carbon ledger, monitoring projects, field forms and dashboards) so you launch with a working environmental data flow, not a half-wired stack.

- Carbon ledger and emission-factor configuration for your jurisdictions
- Monitoring projects, sites and field forms set up for your teams
- Sensor, satellite and data-source connections wired in
- Dashboards and disclosure templates configured to your frameworks
- Validated cutover so the first real measurement lands on day one

3.2 · INTEGRATIONS

Integrations & Data Pipelines

EcoImpactHub is API-first. We connect your own systems through its documented API and webhooks (IoT sensors, satellite providers, ERP and finance, BI tools and notifications) so data flows in and out instead of being re-keyed.

- IoT and environmental-sensor ingestion set up through the API
- Satellite and geospatial-imagery provider connections
- ERP, finance and procurement sync for activity data
- BI and data-warehouse access through the API for downstream analytics
- Webhook and event subscriptions configured for downstream systems

3.3 · MANAGED OPERATIONS

Managed Environmental Operations

Prefer to focus on the mission? We operate your EcoImpactHub program for you, keeping the carbon ledger current, watching sensor and data health, maintaining reports and acting on what the data shows.

- Carbon-ledger and activity-data upkeep across reporting periods
- Sensor-, data- and pipeline-health monitoring
- Report and disclosure maintenance against deadlines
- Scheduled maintenance, backups and incident response
- Usage and impact reporting back to your team

04 Two ways to work with us

POWERED BY ECOIMPACTHUB · BUILD

We set it up with you: programs, integrations and data sources

Our specialists work alongside your team to stand up your environmental program on EcoImpactHub. The carbon ledger, monitoring projects, field forms and dashboards are configured to how you work, with sensors and data sources wired in, validated before the first real measurement flows.

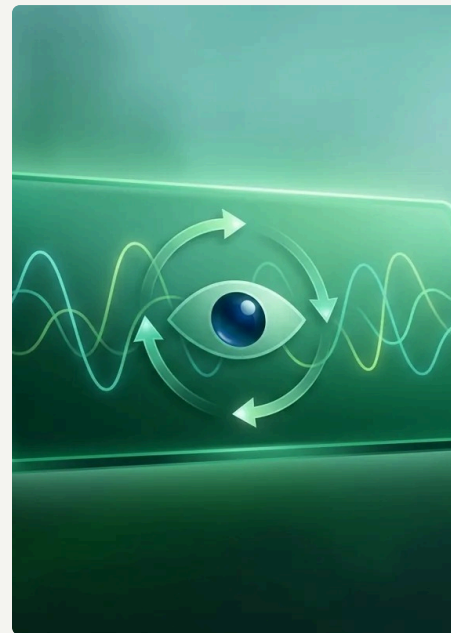

- Carbon ledger, monitoring projects and field forms configured for your teams
- Sensor, satellite and data-source integration
- Validated cutover so the first real measurement lands on day one

POWERED BY ECOIMPACTHUB · OPERATE

Or hand us the program: managed environmental operations

When you would rather focus on the mission, we run the program for you. We keep the carbon ledger current, watch sensor and data health, maintain reports against deadlines and act on what the data shows, with usage and impact reporting back to your team.

- Carbon-ledger and data-health monitoring across the program
- Report and disclosure upkeep against reporting deadlines
- Role-scoped, fully audited data flows, never shared secrets

05 How we engage

A clear path from intent to impact. The same loop whether it is a one-week program stand-up or a multi-quarter monitoring initiative: scoped, reviewable and audited at every step.

01

Discover

We map your sites, data sources, frameworks and goals, and agree on what "done" looks like before any work starts.

02

Plan

A scoped, reviewable plan: carbon methodology, monitoring design, integrations, governance and rollout sequence, with checkpoints where it matters.

03

Build

We configure the ledger, set up monitoring, wire data sources and validate everything, shipping in increments you can see.

04

Operate

We hand over with docs and enablement, or stay on to run the program: monitored, audited and reporting from the first day.

ENGAGEMENT MODEL

Engage one service, or combine several into a program.

SUPPORT & SLAS

From standard support to priority response with defined SLAs. Tiers are scoped to your plan and operational needs.

PRICING

Contact us. Tell us about your sites, data sources and goals and we will scope the right mix.

06 We leave your team able to run it without us

Every engagement ships documentation, golden-path playbooks and hands-on enablement. Whether you keep us on to operate the program or take the keys yourself, your scientists, program managers and engineers understand the platform, not just the dashboard.

- Role-based workshops for field teams, analysts and engineering teams
- API, CLI and SDK enablement so teams can connect their own systems
- Onboarding checklists and curated learning paths

HOW TO START

Let's scope what you need

Tell us about your sites, data sources and goals. We will recommend the right mix of consulting, implementation, operations and enablement, and a plan to get there.
