

SERVICES & CONSULTING

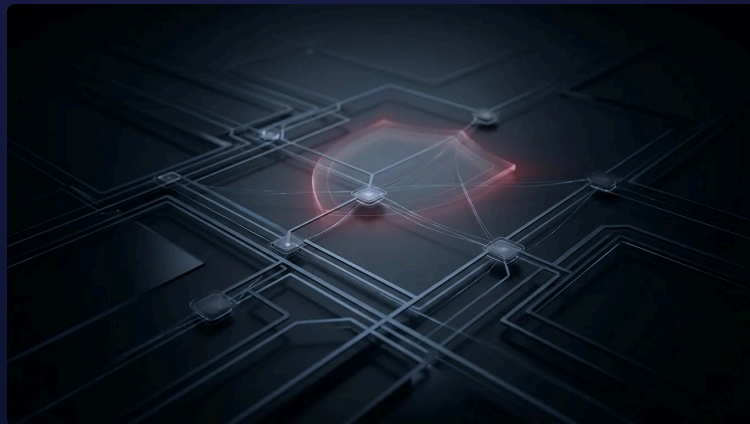

Expert hands on IntelWatchtower

IntelWatchtower is an intelligence platform you can run yourself, but you do not have to do it alone. We help you adopt and get more from it, and we deliver done-for-you mission outcomes powered by it: deployments, integrations, migrations, operations enablement, governance, and training.

GROUNDED IN THE PRODUCT

RBAC & AUDIT THROUGHOUT

HEADLESS & API-FIRST

01 How the services fit the product

IntelWatchtower is a unified, secure military and intelligence platform: collection, all-source fusion, geospatial analysis, cyber threat detection, and a real-time common operating picture. The services wrap around it, across its whole lifecycle.

Every service is grounded in a real product capability. Engage one, or combine several into a program. The same loop applies whether it is a one-week environment stand-up or a multi-quarter mission program: scoped, reviewable, and audited at every step.

TRACK 01

Adopt IntelWatchtower

Consulting, implementation, migration, security, and training so your team gets the full value of the platform, faster, and with governance from day one.

Intelligence Consulting & Architecture · Migration & Onboarding from Legacy Tooling · Operations & Workflow Enablement · Analytics & AI Enablement · Security, RBAC & Governance · Training & Team Enablement

TRACK 02

Powered by IntelWatchtower

Done-for-you outcomes we deliver using the product (deployments, integrations, and managed mission operations) so you can focus on the mission.

Implementation & Deployment · Integrations & API Extensibility · Managed Mission Operations

02 · TRACK ONE

Adopt IntelWatchtower

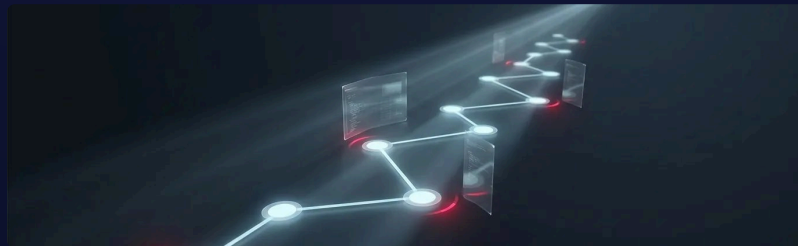

Consulting, implementation, migration, security, and training so your team gets the full value of the platform, faster, and with governance from day one.

IMPROVE YOUR INTELWATCHTOWER

We leave your team able to run it without us

Every engagement ships documentation, golden-path playbooks, and hands-on enablement, so your analysts, operators, and engineers understand the platform, not just the dashboard.

- 2.1 Intelligence Consulting & Architecture
- 2.2 Migration & Onboarding from Legacy Tooling
- 2.3 Operations & Workflow Enablement
- 2.4 Analytics & AI Enablement
- 2.5 Security, RBAC & Governance
- 2.6 Training & Team Enablement

02 Adopt IntelWatchtower: design, migrate, operate

2.1 · CONSULTING

Intelligence Consulting & Architecture

We help you design how IntelWatchtower fits your mission (collection sources, the entity and event model, the fusion approach, and the classification scheme) so your intelligence picture is modelled correctly from day one.

- Discovery of your current collection, analysis, and reporting tooling
- Entity and event data-model design across your disciplines
- Collection-source and ingestion-pipeline architecture
- Classification and workspace-RBAC scheme design (need-to-know compartmentation scheme design once it ships on the Enterprise roadmap)
- Workspace, RBAC, and multi-tenancy design grounded in the platform

2.2 · MIGRATION

Migration & Onboarding from Legacy Tooling

Moving off a tangle of disconnected analysis tools, spreadsheet trackers, and siloed feeds? We migrate your entities, cases, and historical reporting into IntelWatchtower with minimal disruption and a clear chain of custody.

- Inventory of current collection, analysis, and case systems
- Entity, case, and reporting migration with mapping and validation
- Historical data import with provenance and chain of custody preserved
- Parallel-run validation and a reversible cutover plan
- Team handover with runbooks for the new intelligence workflow

2.3 · OPERATIONS

Operations & Workflow Enablement

We turn raw capability into a smooth analytic operation (collection management, tasking, case workflows, and the alerting that drives decisions), all configured to how your team actually runs the intelligence cycle.

- Collection-management and tasking workflow configuration
- Case and investigation templates configured for your processes
- Alerting thresholds and briefing-assembly configuration
- Common operating picture layouts for analysts and command
- Reporting and dissemination workflows with provenance built in

02 Adopt IntelWatchtower: analyse, govern, enable

2.4 · ANALYTICS & AI

Analytics & AI Enablement

We help you put the platform's data to work (anomaly detection, behavioral baselines, and pattern analysis) as a governed roadmap, so analysis moves from manual review to assisted insight without overstating what exists today.

- Baseline and anomaly-detection configuration on your data
- Pattern-analysis and trend-detection scoped to your mission
- Model evaluation and analyst-in-the-loop review design
- Explainability and provenance so every flag can be justified
- Honest current-vs-roadmap framing so expectations stay accurate

2.5 · GOVERNANCE

Security, RBAC & Governance

We configure IntelWatchtower to meet your compliance bar (least-privilege roles, classification labeling, audited actions, and governed cross-agency sharing), inherited from the Burdenoff platform rather than re-invented. Clearance-based need-to-know compartmentation is on the Enterprise roadmap.

- Workspace RBAC role design and least-privilege access reviews
- Classification labeling setup (need-to-know compartmentation setup once it ships on the Enterprise roadmap)
- Audit-log review, retention configuration, and evidence workflows
- Releasability and cross-agency disclosure governance
- Data-protection and subprocessor alignment for your jurisdiction

2.6 · ENABLEMENT

Training & Team Enablement

We get your analysts, operators, and engineers genuinely productive, not just logged in. Role-based sessions and golden-path playbooks so a new analyst works a case, and a new developer drives the API, in hours.

- Hands-on workshops for analysts, operators, and platform teams
- Golden-path playbooks for collection, fusion, and case workflows
- API, CLI, MCP, and SDK enablement for engineering teams
- Command and oversight training for watch officers and leaders
- Onboarding checklists and curated learning paths

03 · TRACK TWO

Powered by IntelWatchtower

Done-for-you outcomes we deliver using the product (deployments, integrations, and managed mission operations) so you can focus on the mission.

WE SET IT UP WITH YOU

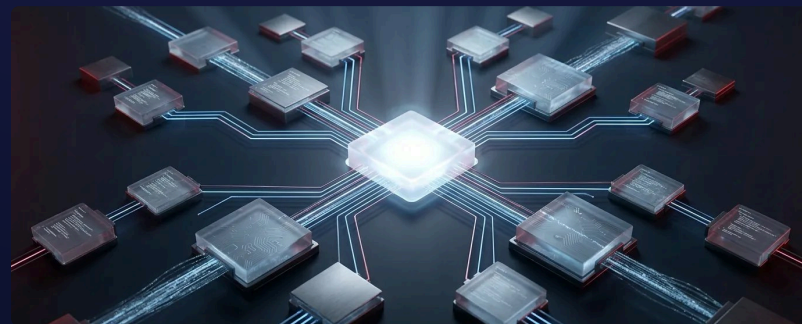

Feeds, integrations, and the operating picture

Our engineers work alongside yours. Collection feeds, the fusion model, and the common operating picture are wired and configured to your mission, validated in a sandbox before a single live workflow runs.

3.1 Implementation & Deployment

3.2 Integrations & API Extensibility

3.3 Managed Mission Operations

03 Powered by IntelWatchtower

3.1 · DEPLOYMENT

Implementation & Deployment

Our engineers stand up your IntelWatchtower environment end to end (wiring collection feeds, configuring fusion and the operating picture, and setting access controls) so you go live with a working intelligence workflow, not a half-wired stack.

- Collection-feed onboarding and pipeline configuration
- Entity resolution, link-graph, and fusion model setup
- Common operating picture and alerting configuration
- Classification labels and role-based access setup
- Sandbox-validated cutover so the first real workflow works on day one

3.2 · INTEGRATIONS

Integrations & API Extensibility

IntelWatchtower is API-first and event-driven. We configure its feed ingestion, webhooks, and API to work with the rest of your environment (sensor and feed sources, geospatial systems, SIEM/SOC tooling, notifications, and reporting) so intelligence flows instead of being re-keyed.

- OSINT, sensor, and partner-feed ingestion configuration
- Geospatial and imagery system integrations for GEOINT layers
- SIEM/SOC and cyber-telemetry integration for threat detection
- Webhooks and event-driven integrations for downstream systems
- API and webhook enablement so your engineers can connect your own systems

3.3 · MANAGED OPS

Managed Mission Operations

Prefer to focus on the mission? We operate your IntelWatchtower environment for you: monitoring pipeline health, keeping sources and detections current, watching the operating picture, and acting on what the data shows.

- Collection-pipeline and ingestion-health monitoring
- Detection-rule, watchlist, and indicator upkeep
- Operating-picture and alerting oversight
- Scheduled maintenance, backups, and incident response
- Usage, coverage, and analytics reporting back to your team

03 Two ways to work with us

WE SET IT UP WITH YOU

Feeds, integrations, and the operating picture

Our engineers work alongside yours to stand up your intelligence environment on IntelWatchtower. Collection feeds, the fusion model, and the common operating picture are wired and configured to your mission, validated in a sandbox before a single live workflow runs.

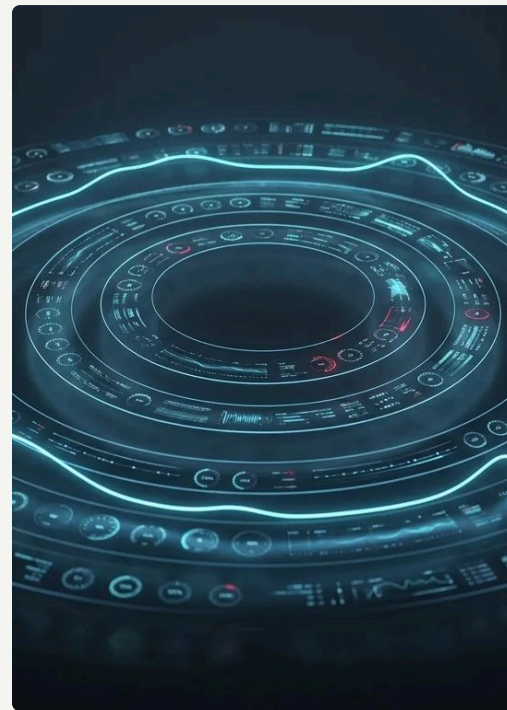

- Collection feeds and ingestion pipelines wired and configured
- Entity model, fusion, classification, and access-control setup
- Sandbox-validated cutover so the first real workflow works on day one

OR HAND US THE WATCH

Managed mission operations

When you would rather focus on the mission, we run the environment for you. We monitor pipeline health, keep sources and detections current, watch the operating picture, and act on what the data shows, with usage, coverage, and analytics reporting back to your team.

- Collection-pipeline and ingestion-health monitoring
- Detection-rule, watchlist, and indicator upkeep
- RBAC-scoped, fully audited operations, never shared secrets

04 How we engage

A clear path from intent to impact. The same loop whether it is a one-week environment stand-up or a multi-quarter mission program: scoped, reviewable, and audited at every step.

01

Discover

We map your collection sources, analysis workflows, classification needs, and goals, and agree on what "done" looks like before any work starts.

02

Plan

A scoped, reviewable plan: entity model, fusion approach, integrations, access controls, and rollout sequence, with checkpoints where it matters.

03

Configure

We wire the feeds, configure fusion and the operating picture, set access controls, and validate everything in a sandbox, shipping in increments you can see.

04

Operate

We hand over with docs and enablement, or stay on to run the environment: monitored, audited, and reporting from the first day.

ENGAGEMENT MODEL

Engage one service, or combine several into a program.

PRICING

Contact us. Tell us about your sources, workflows, and goals and we will scope the right mix.

05 We leave your team able to run it without us

Every engagement ships documentation, golden-path playbooks, and hands-on enablement. Whether you keep us on to operate the environment or take the keys yourself, your analysts, operators, and engineers understand the platform, not just the dashboard.

- Role-based workshops for analysts, operators, and engineering teams
- API, CLI, MCP, and SDK enablement so teams extend it themselves
- Onboarding checklists and curated learning paths

SUPPORT & SLAS

From standard support to priority response with defined SLAs, we keep your environment running: incident response, upgrade guidance, and a named point of contact for enterprise engagements. Tiers are scoped to your plan and operational needs.

HOW TO START

Let's scope what you need

Tell us about your sources, workflows, and goals. We will recommend the right mix of consulting, implementation, operations, and enablement, and a plan to get there.
