

CONSULTING & MANAGED SERVICES

Expert hands on TheGlobalFuel

TheGlobalFuel is a resource-management platform you can run yourself, but you do not have to do it alone. We help you adopt and get more from it, and we deliver done-for-you resource-management outcomes powered by it: operations builds, API connections, migrations, logistics, ESG governance and enablement.

GROUNDED IN THE PRODUCT

RBAC & AUDIT THROUGHOUT

HEADLESS & API-FIRST

01 Services across the resource lifecycle

TheGlobalFuel is a unified energy, mineral and natural-resources management platform, connecting producers, traders and operators across the global resources value chain. The services wrap around it.

Every service is grounded in a real product capability. Engage one, or combine several into a program. The same loop applies whether it is a one-week asset-registry stand-up or a multi-quarter portfolio program: scoped, reviewable and audited at every step.

TRACK 01

Improve your TheGlobalFuel

Consulting, implementation, migration, ESG governance and training so your team gets the full value of the platform, faster, and with governance from day one.

Resource Strategy & Architecture · Migration & Data Onboarding · Logistics & Supply-Chain Enablement · Analytics & Forecasting Enablement · ESG, Compliance & Governance · Training & Team Enablement

TRACK 02

Powered by TheGlobalFuel

Done-for-you outcomes we deliver using the product (operations builds, API connections and managed resource operations) so you can focus on the field and the deal.

Implementation & Operations Build · Integrations & API Connections · Managed Resource Operations

02 · TRACK ONE

Improve your TheGlobalFuel

Consulting, implementation, migration, ESG governance and training so your team gets the full value of the platform, faster, and with governance from day one.

WE LEAVE YOUR TEAM ABLE TO RUN IT

Documentation, playbooks and hands-on enablement

Every engagement ships documentation, golden-path playbooks and hands-on enablement, so your site teams, commercial staff and engineers understand the platform, not just the dashboard.

- 2.1 Resource Strategy & Architecture
- 2.2 Migration & Data Onboarding
- 2.3 Logistics & Supply-Chain Enablement
- 2.4 Analytics & Forecasting Enablement
- 2.5 ESG, Compliance & Governance
- 2.6 Training & Team Enablement

02 Improve your TheGlobalFuel: model, move, flow

2.1 · STRATEGY

Resource Strategy & Architecture

We help you design the right operating model on TheGlobalFuel (asset hierarchy, production model, contract structure and data flows) so a single field or a multi-commodity portfolio is modelled correctly from day one.

- Discovery of your current asset, production and commercial tooling
- Asset and commodity modelling across energy, minerals and renewables
- Production, inventory and movement lifecycle design
- Single-asset vs. multi-asset portfolio topology recommendations
- Workspace, RBAC and multi-tenancy design grounded in the platform

2.2 · MIGRATION

Migration & Data Onboarding

Moving off production spreadsheets, a separate inventory system, contracts that live in PDFs and a supplier list nobody trusts? We migrate your assets, history and commercial data with minimal disruption.

- Inventory of current asset, production, inventory and contract systems
- Asset and reference-data migration with mapping and validation
- Historical production and movement data import where feasible
- Parallel-run validation and a reversible cutover plan
- Team handover with runbooks for the new operating model

2.3 · LOGISTICS

Logistics & Supply-Chain Enablement

We turn raw movements into a smooth supply chain (plan, dispatch, in-transit, delivered) with inventory balances, multi-modal transport and the status transitions that power chain-of-custody.

- Inventory and stockpile configuration by location and grade
- Multi-modal movement planning for truck, rail, pipeline and vessel
- Dispatch, in-transit and delivery status flow design
- Chain-of-custody and provenance configuration for sourcing programmes
- Demurrage- and idle-capital reduction grounded in your real flows

02 Improve your TheGlobalFuel: measure, govern, enable

2.4 · ANALYTICS

Analytics & Forecasting Enablement

We help you put the platform's data to work (output trends, asset utilization, cost per unit and production forecasting) as a governed roadmap, so decisions become data-backed without overstating what exists today.

- Operational dashboards for output, utilization, downtime and cost
- Cost-per-unit and asset-comparison analytics across the portfolio
- Production-forecasting and demand-signal enablement as it ships
- Network- and logistics-optimization design for your supply chain
- Honest current-vs-roadmap framing so expectations stay accurate

2.5 · ESG & GOVERNANCE

ESG, Compliance & Governance

We configure TheGlobalFuel to your compliance bar (emissions and ESG tracking, permits and licences, provenance and least-privilege roles) inherited from the Burdenoff platform, not re-invented.

- Emissions, energy, water and waste tracking against assets
- Permit, licence and regulatory-obligation register with renewals
- Chain-of-custody and responsible-sourcing configuration
- Workspace RBAC design and least-privilege access reviews
- Audit-log review, retention and evidence workflows

2.6 · ENABLEMENT

Training & Team Enablement

We get your site teams, commercial staff and engineers genuinely productive, not just logged in: role-based sessions and golden-path playbooks so a new operator captures production, and a new developer drives the headless API, in hours.

- Hands-on workshops for operations, commercial and platform teams
- Golden-path playbooks for assets, production and logistics
- API, CLI, MCP and SDK enablement for engineering teams
- Admin and oversight training for portfolio and platform operators
- Onboarding checklists and curated learning paths

03 · TRACK TWO

Powered by TheGlobalFuel

Done-for-you outcomes we deliver using the product (operations builds, API connections and managed resource operations) so you can focus on the field and the deal.

WE SET IT UP WITH YOU

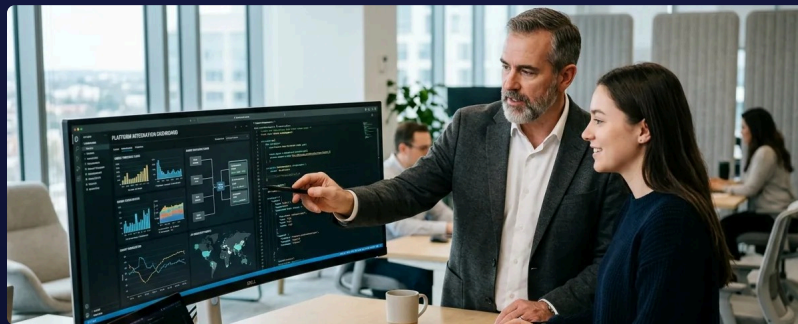

Asset registers, API connections and headless operations

Our engineers work alongside yours to stand up your resource backbone. Asset registry, production capture, inventory, contracts and movements are driven from your control room, field app or partner systems via API, validated in a sandbox before a single real cycle runs.

3.1 Implementation & Operations Build

3.2 Integrations & API Connections

3.3 Managed Resource Operations

03 Powered by TheGlobalFuel

3.1 · BUILD

Implementation & Operations Build

Our engineers stand up your TheGlobalFuel-powered operation end to end, wiring asset registers, production capture, inventory and contracts via API, so you go live with a working resource backbone, not a half-configured stack.

- Asset registry and production-capture setup for your sites
- Inventory, movement and logistics configuration by location and grade
- Offtake, supply and sales contract setup with pricing terms
- Counterparty, supplier and service-partner onboarding
- Sandbox-validated cutover so the first real cycle works on day one

3.2 · INTEGRATIONS

Integrations & API Connections

TheGlobalFuel is headless and API-first. We connect it to the rest of your stack (ERP and finance, field and sensor data, logistics partners and analytics) through its API, SDKs and webhooks, so resource data flows instead of being re-keyed.

- ERP, finance and accounting connections over the API
- Field-data, SCADA and sensor ingestion for production and downtime
- Logistics, transport and partner-system connections for movements
- Webhook and event configuration for downstream systems
- API and SDK guidance so control rooms, field apps and partners connect their own systems

3.3 · MANAGED OPERATIONS

Managed Resource Operations

Prefer to focus on the field? We operate your TheGlobalFuel backend for you: monitoring production and inventory health, keeping contracts and counterparties current, watching movements and deliveries, and acting on what the data shows.

- Production- and inventory-health monitoring across assets
- Contract, counterparty and supplier-record upkeep
- Movement and delivery oversight against contracted volumes
- Scheduled maintenance, backups and incident response
- Usage, quota and analytics reporting back to your team

03 Or hand us the control room

When you would rather focus on the field and the deal, we run the backend for you.

We monitor production and inventory health, keep contracts and counterparties current, watch movements and deliveries, and act on what the data shows, with usage, quota and analytics reporting back to your team.

- Production- and inventory-health monitoring across the portfolio
- Contract, counterparty and supplier-record upkeep
- RBAC-scoped, fully audited commercial and logistics flows

SUPPORT & SLAS

From standard support to priority response with defined SLAs: incident response, upgrade guidance, and a named point of contact for enterprise engagements. Tiers are scoped to your plan and operational needs.

04 How we engage

A clear path from intent to impact. The same loop whether it is a one-week asset-registry stand-up or a multi-quarter portfolio program: scoped, reviewable and audited at every step.

01

Discover

We map your assets, production, inventory, contracts and goals, and agree on what "done" looks like before any work starts.

02

Plan

A scoped, reviewable plan: asset and production model, inventory and logistics, integrations, ESG, RBAC and rollout sequence, with checkpoints where it matters.

03

Build

We stand up the asset registry, wire production and inventory, configure contracts and movements, and validate everything in a sandbox, shipping in increments you can see.

04

Operate

We hand over with docs and enablement, or stay on to run the backend: monitored, audited and reporting from the first day.

ENGAGEMENT MODEL

Engage one service, or combine several into a program.

PRICING

Contact us. Tell us about your assets, production and goals and we will scope the right mix.

05 We leave your team able to run it without us

Every engagement ships documentation, golden-path playbooks and hands-on enablement. Whether you keep us on to operate the backend or take the keys yourself, your teams understand the platform, not just the dashboard.

- Role-based workshops for operations, commercial and engineering teams
- API, CLI, MCP and SDK enablement so teams connect their own systems
- Onboarding checklists and curated learning paths

Governed, audited, secure. Every engagement works within the platform's RBAC and audit model: least-privilege access across operations, commercial and leadership, with every action attributable and no shared secrets.

HOW TO START

Let's scope what you need

Tell us about your assets, production and goals. We will recommend the right mix of consulting, implementation, operations and enablement, and a plan to get there.
